

Advanced Data Modelling and Form Design

Aim

To extend the Insurance Claim application in Zoho Creator by implementing advanced field types and features for branch verification, claimant evidence, claim assessment, automated payout calculation, digital declaration, and application tracking.

Theory

Advanced data modelling in Zoho Creator uses specialized field types and form components to collect, manage, validate, calculate, and display detailed insurance claim information. In this experiment, the basic Claim Request Form is extended with advanced sections that support branch lookup, claimant media, claim assessment, computed values, declaration, and system-generated tracking information.

The advanced claim form contains the following sections:

- **Section E — Branch Verification & KYC**
- **Section F — Claim Evidence & Media Details**
- **Section G — Claim Amount & Assessment**
- **Section H — Declaration & System-Generated Values**

Sections and Fields

Section E — Branch Verification & KYC

- **Insurance_Branches** — Lookup field used to select the servicing insurance branch from the branch master.
- **Claimant Photo** — Image field for claimant identification and KYC evidence.
- **Supporting Document Upload** — File Upload field for claim-related supporting documents.
- **Claim Risk Score** — Decimal field for recording the claim risk assessment value.

Section F — Claim Evidence & Media Details

- **Incident Evidence URL** — URL field for an online evidence or reference link.
- **Incident Video** — Video field for visual incident evidence.
- **Claimant Voice Note** — Audio field for a claimant's supporting voice note.

Section G — Claim Amount & Assessment

- **Has Previous Claim** — Decision Box for a Yes/No claim-history decision.
- **Claim Amount** — Currency field for the amount being claimed.
- **Coverage Percentage** — Percent field for the applicable coverage percentage.
- **Estimated Payout** — Formula field that automatically calculates the expected payout.

Section H — Declaration & System-Generated Values

- **Claim Terms Display** — Rich Text field used to display claim terms and conditions.
- **Claimant Digital Signature** — Signature field for the claimant's declaration.
- **Claim Submitted On** — Date-Time field for recording the submission time.
- **Claim ID** — Auto Number field for generating a unique claim reference.
- **Claim Tracking QR Code** — QR/Barcode field generated for claim tracking.

Procedure

1. Open the existing **Claim_Request_Form** application in Zoho Creator.
2. Create **Section E — Branch Verification & KYC** and add the branch Lookup, claimant Image, supporting File Upload, and Decimal risk-score fields.
3. Create **Section F — Claim Evidence & Media Details** and add the URL, Video, and Audio fields.
4. Create **Section G — Claim Amount & Assessment** and add the Decision Box, Currency, Percent, and Formula fields.
5. Configure the Estimated Payout formula using the claim amount and coverage percentage.
6. Create **Section H — Declaration & System-Generated Values** and add the Rich Text, Signature, Date-Time, Auto Number, and QR/Barcode fields.
7. Configure mandatory fields and the required field properties and validations.
8. Save the form and open the live preview.
9. Enter sample claimant and claim information in the form.
10. Upload sample claimant evidence and provide the required media/reference information.
11. Enter the claim amount and coverage percentage and verify the automatically calculated Estimated Payout.
12. Provide the declaration and digital signature, then submit the claim.
13. Verify the submitted information in the **Claim_Request_Report**, including the calculated payout, submission date, and QR code.

Note: The SubForm advanced field was not included because it could not be added to the configured section in the current Zoho Creator form builder.

Validation & Configuration

- Branch Lookup is connected to the **Insurance_Branches** master and is selected rather than entered as free text.
- Claim Amount accepts a monetary value and Coverage Percentage accepts a percentage used by the payout formula.
- Estimated Payout is read-only and recalculates from the entered assessment values.
- Claimant Digital Signature and other required fields are configured for submission validation.

The screenshot displays a web browser window with the URL `creatorapp.zoho.in/vishagan.m.2024.aimd_rja314/insurance-claim/#Form:Claim_Request_Form`. The application interface includes a dark sidebar on the left with the following menu items: **Insurance Claim**, **Claim_Request_Form** (selected), **Claim_Request_Form Report**, **Claim_Request_Report**, and **Insurance_Branches**. The main content area is titled **Claim_Request_Form** and contains the following fields:

- Claimant Name ***: Two input fields for **First Name** and **Last Name**.
- Claimant Type ***: Three radio button options: **Policyholder**, **Nominee**, and **Third Party**.
- Policy Number ***: A single-line text input field.
- Email Address**: A single-line text input field.
- Contact Number ***: A field with a country code dropdown (set to **+91**) and a text input field containing **81234 56789**.
- Residential Address**: Three stacked text input fields labeled **Address Line 1**, **Address Line 2**, and **City / District**.
- State / Province**: A dropdown menu currently showing **-Select-**.

At the bottom of the sidebar, the user's profile is visible with the name **VISHAGAN ...** and a circular icon.

Result

The Insurance Claim application was successfully extended in Zoho Creator with organized advanced sections, branch lookup, claimant evidence fields, claim assessment fields, automatic Estimated Payout calculation, digital declaration, and system-generated claim tracking information. Submitted records were successfully displayed in the **Claim_Request_Report**, including the calculated payout, submission timestamp, and QR code.
